

JJIF - MANAGEMENT OF CONCUSSION AND OTHER HEAD INJURIES

The Board recognizes that concussions and other head injuries are serious and could result in significant brain damage and/or death if not recognized and managed properly. The Board adopts this policy to promote the safety of students participating in school activities, including but not limited to extracurricular activities and interscholastic sports. TRAINING

By August 31, or prior to the beginning of each sports season, school personnel (including volunteers) identified by the RSU 21 Concussion Policy Management Team, must be made aware of this school policy and protocols related to the management of concussive injuries and participate in concussion awareness training that includes recognizing signs and symptoms that may suggest a concussive or other head injury. This training must be consistent with protocols as identified or developed by the Maine Department of Education (DOE) and include instruction in the use of reporting forms as required by the DOE.

Coaches are required to undergo refresher training every two years, based on the recommendations of the DOE and/or when protocols and forms have been revised.

STUDENT AND PARENTS/GUARDIANS

Annually, at the beginning of each school year, students and parents/guardians of these students will be provided information including:

- The risk of concussion and other head injuries and the dangers associated with continuing to participate when a concussion or other head injury is suspected;
- The signs and symptoms associated with concussion and other head injuries; and
- The school administrative unit's protocols for:
 - o Removal of the student from the activity when the student is suspected of having sustained a concussion or other head injury,
 - o Evaluation, and
 - o Return to full participation in school activities.

The student and his/her parent(s)/guardian(s) must sign a statement acknowledging that they received and read this information before the student is allowed to participate in any school-sponsored athletic activity.

MANAGEMENT OF CONCUSSIVE AND OTHER HEAD INJURIES

It is the responsibility of staff members involved in school activities and trained in the signs and symptoms related to concussion or other head injury, to act in accordance with this policy when the staff member recognizes that a student may be exhibiting such signs and symptoms of a concussion.

Any student suspected of having sustained a concussion or other head injury during a school activity, including but not limited to participation in interscholastic sports, must be removed from the activity immediately. A student and his/her parent(s)/guardian(s) will be informed of the need for an evaluation for brain injury before the student is allowed to return to full participation in school activities including

learning. No student is permitted to return to the activity or to participate in other school activities on the day of the suspected concussion.

Any student having sustained a head injury is prohibited from further participation in any school activities until he/she is evaluated for concussion. If a concussion is suspected, the student must be removed from school activities and evaluated by a licensed health care provider trained in concussion management. The school nurse, athletic trainer, coach, or other staff member may provide the student or parent with documentation to be completed by the student's physician. If a concussion is confirmed, the student is not permitted to return to full participation in any school activities until medically cleared to do so by a licensed health care provider trained in concussion management. More than one evaluation by the student's health care provider may be necessary before the student is cleared for full participation and a completed evaluation and care plan, determined by the student's HCP, must be submitted to the appropriate district staff.

Coaches and other school personnel shall comply with the student's treating health care provider trained in concussion management recommendations regarding gradual return to participation. If at any time during the return to full participation in school activities the student exhibits signs and symptoms of concussion, the student must be removed from the activity and be re-evaluated by the treating licensed health care provider trained in concussion management.

COGNITIVE CONSIDERATIONS

School personnel should be alert to cognitive and academic issues that may be experienced by a student who has suffered a concussion or other head injury, including but not limited to:

- difficulty with concentration, organization, long-and-short term memory and
- sensitivity to bright lights and sounds.

School personnel shall accommodate a gradual return to full participation in activities as appropriate, based on the recommendation of the student's concussion trained health care provider and appropriate designated school personnel (e.g. 504 Coordinator)

CONCUSSION POLICY MANAGEMENT TEAM

The Superintendent will appoint a Concussion Policy Management Team including a school administrator to be responsible, under the administrative supervision of the Superintendent, to make recommendations related to the implementation of this policy. The Concussion Policy Management Team will include the Assistant Superintendent, respective school nurse, Athletic Director, Athletic Trainer, and may include one or more principals or assistant principals, the school physician, and other school personnel or consultants as the Superintendent deems appropriate.

The team shall oversee and implement this policy and related protocols for concussive head injuries based on the generally accepted protocols. This team will identify the school personnel who shall be trained in concussion signs and symptoms and the school activities covered by this policy. This team will also identify use of reporting forms which will document injury evaluation, care plans, academic accommodations, and return to participation that are to be completed by students HCP.

The policy and/or related protocols should be reviewed when generally accepted protocols change.
